

Evan Cortez

Full-Stack Engineer · Product Builder

Provo, UT · (385) 309-7718 · evanvcortez@gmail.com · evancortez.me · github.com/evcgit · linkedin.com/in/evan-cortez

SUMMARY

Full-stack engineer who ships across frontend, backend, and infrastructure on a small eng team. Builds payment systems, workflow automation, and ops tooling—plus production SaaS with multi-tenant architecture and payments. Measures success in cash collected, hours saved, and systems people rely on every day.

PRODUCT

BidzBase — Founder / Builder

2025 – Present

Production multi-tenant SaaS for subcontractors · bidzbase.com

React · Django · PostgreSQL · Redis · Stripe Billing + Connect · SendGrid · Docker · AWS

- Built and launched a live SaaS covering estimate → proposal → accept/decline → invoice → get paid, plus scheduling, time tracking, analytics, roles, PDFs, and email automation—responsive for desktop and phone
- Shipped from initial idea to production with real users in roughly one month; continues iterating from live usage
- Designed multi-tenant architecture with Stripe subscriptions, Stripe Connect, Docker deployment, and AWS infrastructure

EXPERIENCE

Full-Stack Software Engineer

Jul 2024 – Present

Right Angle Engineering · End-to-end ownership across React, Django, and AWS

React · TypeScript · React Query · Django · MySQL · Stripe · Puppeteer · AWS CDK · ECS · Docker

- Built Stripe payment flows that charge when work is approved—tying billing to the workflow with Autopay, settlement jobs, and failed-payment alerts
- Owned backend + integration work that pulls jobs from external portals into internal APIs, cutting intake ops time roughly in half and raising throughput without proportional headcount
- Solo-built in-app stamping and packet customization so deliverables no longer depended on physical office handoffs or third party software
- Led per-customer pricing catalogs and custom bid APIs/UI so sales could express real commercial terms in the system
- Cut API traffic ~66% and made the heaviest screens ~3× faster via request architecture, pagination, and serializer cleanup
- Solo permissions refactor across org, user, and job surfaces; owned ECS/ALB migration for zero-downtime deploys

Project Manager → Software Engineer

Feb 2024 – Jul 2024

Right Angle Engineering

- Promoted into engineering after independently building internal full-stack tools that improved team workflows
- Coordinated planning-to-delivery on high-volume client intake; later automation work grounded in doing the job firsthand

Market Manager

Jun 2022 – Oct 2023

Solcius

- Managed 200+ residential solar installations; led a 10-person operations team through compliance, delivery, and client outcomes
- Improved internal processes by ~30%, grounding later engineering work in real operational constraints

SKILLS

Frontend	React, TypeScript, Next.js, React Query, MUI, CSS
Backend	Python, Django, Django REST Framework, Dramatiq, Node.js
Data	PostgreSQL, MySQL, Redis
Cloud / Infra	AWS (ECS, ALB, EFS, S3), Docker, AWS CDK, Nginx, GitHub Actions
Payments	Stripe Billing, Connect, PaymentIntents, Autopay / webhooks
Integrations	Puppeteer scrapers, S3 uploads, client-portal automation
AI Tooling	Cursor, Claude, ChatGPT — used across architecture, implementation, debugging, and review

EDUCATION

Mountainland Technical College — Web Development Certificate

Completed 2024

Utah Valley University — Information Systems coursework

In progress
